Pellera EVS IQ Services Suite (EVS IQSS)

Modernize VMware workloads on AWS—securely, efficiently, and on your terms

Solving public sector modernization challenges

Public sector clients face mounting pressure to modernize aging infrastructure, meet evolving mandates, and deliver secure, scalable digital services. But limited resources, legacy systems, and Broadcom licensing changes often increase operational risk and slow progress.

Pellera EVS IQ Services Suite helps solve for:

- Reduces operational overheard of the environment
- Legacy systems that limit modernization efforts
- Security and compliance concerns that slow innovation
- Siloed operations and inefficient resource utilization
- Data protection and continuity challenges

How Pellera EVS IQ Services Suite helps

Streamline VMware migration and operations with modular services built on Amazon EVS

Pellera EVS IQ Services Suite helps clients:

- Migrate VMware workloads to AWS without re-platforming or re-factoring while lowering your migration risks and timelines
- Operate more efficiently with secure, scalable infrastructure and automated Day 2 support
- Optimize with cost controls, funding alignment, and visibility across environments

Whether you're migrating out of a data center or responding to new mandates, Pellera EVS IQ Services accelerate transformation, securely, affordably, and on your terms.

Simplify VMware on AWS with Pellera—no re-platforming or re-factoring.

Where EVS IQ Services Suite delivers value

Data center Expansion

Expand your on-prem data center using AWS infrastructure.

Data center Evacuation

Rapidly migrate VMware workloads from on-premises data centers to AWS.

Disaster Recovery

Leverage EVS as a cloud-based disaster recovery target using the same VMware tools your teams already know.

Platform Modernization

Transition legacy infrastructure to a modern, cloud-first architecture.

Amazon EVS gives agencies the flexibility to start small and scale with on-demand, one-year and three-year reservations available. EVS provides complete control of your VCF environment with full administrative access but does require lifecycle management tasks such as updating, patching and replacing failed hosts in the VCF environment.

Pellera EVS IQ SS combines that infrastructure flexibility with Day 2 services that handle patching, upgrades, host replacement, and support—so your team can migrate and operate VMware securely and efficiently, while lowering the operation overhead of managing the EVS environment.

What sets Pellera apart?

A trusted partner for modernizing VMware—securely and efficiently.

- AWS-certified expertise with 50+ certifications, including the AWS Migration Competency
- Optional Day 2 support for patching, monitoring, and host maintenance
- End-to-end guidance from certified VMware and AWS specialists
- Successful experiences helping public sector clients navigate and receive AWS funding
